Why this guide exists

SuiteDash documents itself one feature at a time. Its help center has hundreds of articles, each accurate, each scoped to a single screen or a single setting. None of them tell you how the parts fit together. You can spend weeks clicking through the platform and still not have a mental map of where automations live in relation to forms, why FLOWs are a separate concept from automations, or which menu items show up only on the Pinnacle tier.

This guide is the mental map. It is what an experienced SuiteDash operator would have wanted on day one — every module summarized in plain language, every cross-reference made explicit, every gap in the official documentation called out by name.

Twenty-three chapters cover the platform itself: the side navigation, CRM, projects, office, marketing, automations, forms, documents, files, calendar, communication, support, the LMS, pages, white labeling, staff and roles, the Power-Ups, settings, the API, FLOWs, generators, custom fields, and the corners where the help center stops being thorough. A twenty-fourth chapter — separate from the platform reference — is a ninety-minute playbook for getting a five-client services business actually live in the portal, in the order I'd do it myself.

The reference chapters are exhaustive. The playbook chapter is opinionated. Read whichever you need. If you are configuring the platform for the first time, start with the playbook; the reference chapters tell you what the playbook is leaving out and why.

1. Platform Overview & Navigation Structure

1.1 Main Side Navigation Menu (Left Sidebar)

The side navigation bar is the primary navigation and remains static across all pages. These are the default top-level menu items (customizable per role):

Menu Item	Description
Dashboard	Default landing page with dynamic widgets and content blocks
CRM	Contacts, Companies, Deals, Circles, Follow-ups
Projects	Project list, Kanban views, Tasks, Phases
Office	Invoices, Estimates, Proposals, Subscriptions, Expenses
Marketing	Email Campaigns, Drip Sequences, Audiences, Subscriber Forms
Files	Shared Folders, File Toolkit, File Requests, File Transfers
Calendar	My Calendar, Appointments, Schedules, Follow-ups
Documents	Contracts, e-Signing, Document Generators
Messages	Secure Messaging, Live Chat
Support	Support Tickets, Inboxes
LMS	Learning Management System, Courses, Modules, Lessons
Pages	Dashboards, Portal Pages, Landing Pages
Content	Portal content accessible as a top-level menu item

1.2 Menu Customization System

- **Access:** Profile Image > Fly-Out Menu > Custom Menus
- **Customization Per Role:** Separate menu configurations for each role (Admin, Staff, Client, Prospect, Lead)
- **Menu Item Types:**
 - **Top-Level Menu Item:** Shows in collapsed sidebar; can be a direct link (non-expandable) or expandable parent

- **Sub-Menu Item:** Nested under a Top-Level item; requires parent expansion to access
- **Capabilities:** Reorder items, rename items, change icons, add custom direct-link menu items, show/hide items per role
- **Dynamic Pages Menu (DPM):** Automatically built on-the-fly each time a user logs in, based on their permissions and assignments

1.3 Top Bar / Header Elements

- **Profile Image (Top Left):** Opens fly-out menu with quick settings access
- **Quick Find Widget (Bottom of Page or ‘F’ key):** Global search across CRM Contacts, Companies, Projects, and Staff
- **Notifications Bell:** Real-time notifications
- **Quick Actions:** Contextual action buttons

1.4 User Roles & Access Levels

Role	Type	Access Level
Super Admin	Internal	Full platform access, license management
Admin Manager	Internal	Full access except Super Admin details and Manage Account
Admin	Internal	Full admin access with configurable individual permissions
Project Manager	Internal	Admin-level project + CRM access, limited elsewhere
Office Manager	Internal	Admin-level project + CRM + Office access
Teammate	Internal	Projects menu only
Salesperson	Internal	CRM + Deals focus
Freelancer	Internal	Like Teammate but no Team Talk, no Files, no Live Chat
Client	External	Portal access based on permissions
Prospect	External	Limited portal access, pre-conversion
Lead	External	Minimal access, earliest CRM stage

2. CRM (Customer Relationship Management)

2.1 CRM Main Navigation Sub-Pages

- **Contacts** — Individual person records
- **Companies** — Organization/business records
- **Deals** — Sales pipeline / opportunity tracking
- **Circles** — Group/segment organization
- **Follow-ups** — Scheduled follow-up reminders
- **Settings** — CRM-wide configuration

2.2 Contacts

2.2.1 Contact Roles

- **Lead** — Earliest stage, minimal engagement
- **Prospect** — Engaged but not yet a client
- **Client** — Active paying/engaged client

2.2.2 Contact Profile Fields (Default)

- First Name, Last Name
- Email Address (primary + additional)
- Phone Number(s)
- Company Association
- Role (Lead/Prospect/Client)
- Coordinator (assigned staff)
- Salesperson (assigned staff)
- Address (Street, City, State, ZIP, Country)
- Profile Image/Avatar
- Tags
- Portal Access Status (Not Invited, Invited, Active)
- Custom Fields (unlimited, configurable)

2.2.3 Contact Profile Tabs/Sections

- **Overview/Dashboard** — Summary card with key info
- **Notes** — Activity notes, conversation records, context
- **Custom Fields** — All custom data fields

- **Activity Log** — Timeline of all interactions
- **Deals** — Associated deals
- **Projects** — Associated projects
- **Invoices** — Associated invoices
- **Estimates** — Associated estimates
- **Proposals** — Associated proposals
- **Documents** — Associated documents/contracts
- **Files** — Shared files and folders
- **Messages** — Secure message history
- **Support Tickets** — Associated tickets
- **Subscriptions** — Active subscription plans
- **FLOWs** — Assigned and completed FLOWs
- **Follow-ups** — Scheduled follow-ups
- **Appointments** — Scheduled appointments
- **LMS** — Course enrollments and progress
- **Marketing** — Audience memberships
- **Circles** — Circle memberships
- **Automations** — Triggered automations history

2.3 Companies

- Same structure as Contacts but at organizational level
- **Primary Contact** — Designated main point of contact
- **Company Role** — Lead/Prospect/Client (same as contacts)
- **Company Public Custom Fields** — Visible to the company
- **Company Private Custom Fields** — Internal-only fields
- **Associated Contacts** — All linked individual contacts

2.4 Deals (Pipeline Management)

2.4.1 Deal Views

- **List View** — Tabular list of all deals
- **Card View** — Visual cards for each deal
- **Stage View (Kanban)** — Drag-and-drop columns by pipeline stage
- **Forecast View** — Revenue forecasting based on probability

2.4.2 Deal Properties

- Deal Title
- Associated Contact/Company
- Pipeline (multiple pipelines supported)
- Stage (fully customizable stages per pipeline)
- Expected Value (monetary)
- Expected Close Date
- Deal Probability (per-stage probability %)
- Status: Open / Won / Lost
- Followers (staff who receive updates)
- Currency
- Custom Fields
- Tags
- Notes

2.4.3 Pipeline Configuration

- Create multiple independent pipelines
- Custom stages per pipeline (add, rename, reorder, delete)
- Stage probability percentages
- Drag-and-drop stage reordering in Stage Edit Mode
- Color coding per stage

2.4.4 Deal Generators

- Pre-configured deal templates
- Auto-create deals via automations with predefined category, close date, value, currency, followers

2.5 Circles

- Group permissioning and assignment structure for Clients/Prospects
- **Key Property:** Members within a Circle CANNOT see or interact with each other
- Used to bulk-assign: Dashboards, Portal Pages, Files, FLOWS, Auto-Templates
- **Marketing Integration:** Checking the “Marketing” box auto-creates a corresponding Marketing Audience; adding/removing contacts syncs automatically
- Circles can have Auto-Templates applied to them

2.6 Follow-ups

- Calendar-based reminders to follow up with contacts
- Manual creation or generator-based
- **Follow-up Generators:** Pre-configured series of follow-ups
 - Based-On Date options: Generation Day, Date Custom Field, Specific Date, Dynamic Date (e.g., appointment booking)
 - Spacing: Days or weeks after base date
 - Time of day: Target's timezone or static
 - Dynamic Titles with Placeholders

2.7 CRM Settings

- Custom Fields configuration (Contact, Company Public, Company Private)
- Field visibility and required toggles
- Default role assignments
- CRM Dashboard configuration
- Import/Export settings

2.8 CRM Contact & Company Dashboard

- Visual overview showing key metrics
 - Quick access cards for recent contacts/companies
 - Pipeline summary widgets
-

3. Project Management

3.1 Project Main Sub-Pages

- **Projects List** — All projects with filters
- **Kanban View** — Visual task management board
- **My Tasks** — Personal task assignments
- **Task Templates** — Reusable task/phase configurations
- **Project Generators** — Pre-built project templates
- **Settings** — Project configuration

3.2 Project Structure

3.2.1 Project Properties

- Project Title
- Associated Client/Company
- Project Status (Active, Completed, On Hold, Archived)
- Start Date / End Date
- Project Phases (groupings of tasks)
- Team Members (assigned staff)
- Client visibility settings
- Custom Fields
- Tags
- Budget/Hours tracking

3.2.2 Project Dashboard (Per-Project)

- Customizable widgets: Tasks, Files, Milestones
- Progress tracking
- Phase completion status
- Team activity

3.3 Phases

- Container for grouping related Tasks within a Project
- Sequential or parallel phase structures
- Phase completion triggers automations
- Phase-level progress tracking

3.4 Tasks

3.4.1 Task Properties

- Task Title
- Description (rich text)
- Assigned To (one or more staff/freelancers)
- Phase assignment (optional)
- Due Date
- Priority (customizable levels)
- Status: Not Started, In Progress, Completed, etc.

- Subtasks (nested child tasks)
- Time tracking
- File attachments
- Comments/Discussion
- Tags
- Custom Fields

3.4.2 Task Views

- **List View** — Standard list with sort/filter
- **Kanban View — Status:** Columns by task status, drag-and-drop between columns
- **Kanban View — Assignee:** Columns by assigned person
- **Calendar View** — Tasks on calendar by due date

3.4.3 Task Dependencies

- Set predecessor/successor relationships between tasks
- Dependency types supported
- Visual dependency indicators

3.5 Task Templates

- Pre-defined sets of Tasks and Phases
- Auto-assign users based on template configuration
- Auto-generate due dates based on offsets
- Reusable across multiple projects
- Triggered via automations

3.6 Project Generators

- Pre-built complete project structures (phases + tasks + settings)
- Applied to contacts/companies via automations
- Include task assignments, due date calculations, and all project properties
- Generator Types: Can be triggered from automations, FLOWs, or manually

3.7 Project Communication

- **Team Talk** — Internal staff-only message board per project
- **Client Talk** — Client-facing message board per project (staff + clients)

3.8 Project Settings

- Default project configurations
 - Task status customization
 - Phase templates
 - Permission settings
-

4. Office (Invoicing, Estimates, Proposals, Billing)

4.1 Office Main Sub-Pages

- **Invoices** — All invoices with filters/search
- **Estimates** — All estimates
- **Proposals** — All proposals
- **Subscriptions** — Recurring billing management
- **Expenses** — Expense tracking
- **Items / Add-ons / Packages / Taxes / Discounts** — Product catalog settings
- **Settings** — Office-wide configuration

4.2 Invoices

4.2.1 Invoice Properties

- Invoice Number (auto-generated or custom)
- Associated Contact/Company
- Line Items (from Items catalog or custom)
- Add-ons
- Packages
- Taxes (configurable tax rates)
- Discounts (percentage or fixed)
- Due Date
- Payment Terms
- Status: Draft, Sent, Viewed, Paid, Partially Paid, Overdue, Void
- Notes/Memo
- Currency
- Installment payment settings

4.2.2 Invoice Features

- **Invoice Generators:** Pre-created invoice templates applied to clients on demand
- **Recurring Invoice Generator:** Auto-generates invoices on schedule
- **Accumulating Invoice Generator:** Builds up charges over time
- **Installment Payments:** Custom payment arrangement management
- **Online Payment:** Clients pay directly through portal via payment gateway
- **PDF Generation:** Downloadable PDF invoices
- **Email Delivery:** Send invoices via email with branded templates
- **Automations on Payment:** Trigger actions when invoice is paid

4.3 Estimates

- Same line-item structure as Invoices
- **Approval Workflow:** Client can Approve or Reject
- **Auto-Conversion:** Approved estimate automatically converts to an Invoice
- **Automations:** Trigger on approval or rejection

4.4 Proposals

4.4.1 Proposal Properties

- Title
- Associated Contact/Company
- Expiration Date
- Content Sections (rich text, images, media)
- Pricing Tables (embedded)
- Choice Blocks (multiple options for client to select)
- Dynamic Data Placeholders
- E-Signature requirement
- Status: Draft, Sent, Viewed, Approved, Rejected, Expired

4.4.2 Proposal Features

- **Proposal Templates:** Full templates and Page templates
- **Dynamic Proposals:** Placeholders auto-fill with contact/company data
- **Proposal Choice Block:** Multiple selectable options within a single proposal
- **Approval/Rejection:** Client signs to approve or rejects with reason
- **Expiration Reminders:** Two configurable email reminders before expiry

- **Internal Notifications:** Staff notified on sign/reject
- **Post-Approval Automations:** Auto-create project, generate invoice, start onboarding
- **Convert to Invoice:** Direct conversion of approved proposal to billable invoice
- **Dynamic Proposal Generator:** Pre-created proposals triggered via automations

4.5 Subscriptions / Recurring Billing

- **Subscription Plans:** Monthly/yearly/custom interval recurring charges
- Plan creation with pricing, description, trial periods
- Auto-charge client's stored payment method
- **Client Billing Dashboard:** Clients view subscriptions, stored payment info, open invoices, pay invoices, manage subscriptions
- Cancel / Replace subscription actions via automations

4.6 Items / Add-ons / Packages / Taxes / Discounts

- **Items:** Individual products/services with price, description
- **Add-ons:** Supplementary items that can be added to invoices
- **Packages:** Bundles of items/add-ons at package pricing
- **Taxes:** Configurable tax rates (multiple rates supported)
- **Discounts:** Percentage or fixed-amount discounts
- All can be one-time or subscription-based

4.7 Expenses

- Internal expense tracking
- Categorization
- Association with projects/clients

4.8 Office Settings

- Invoice/Estimate/Document/Expense default settings
 - Number formatting and sequences
 - Payment gateway configuration
 - Default terms and notes
 - Email templates for invoices/estimates
 - Currency settings
-

5. Marketing (Email, Drip, Audiences)

5.1 Marketing Main Sub-Pages

- **Campaigns** — Email campaign management
- **Drip Sequences** — Automated email sequences
- **Audiences** — Subscriber lists
- **Subscriber Forms** — Opt-in form builder
- **Campaign Templates** — Reusable email templates
- **Settings** — Email sending configuration

5.2 Email Campaigns

- **Campaign Editor:** Rich text/HTML email builder
- **Content:** Text, images, links, dynamic placeholders
- **Scheduling:** Send immediately or schedule for later date/time
- **Audience Targeting:** Send to specific Audience(s)
- **Campaign Templates:** Pre-built templates library
- **Tracking:** Open rates, click rates, unsubscribes
- **Automation Drips:** Campaigns triggered as part of automation sequences

5.3 Drip Sequences

- Automated email series sent after subscriber joins an Audience
- **Sequence Builder:** Multiple emails in order with configurable delays
- Day/time offsets between each email in the sequence
- Dynamic Data Placeholders in each email
- Automations can be attached to drip steps
- **Automation Drips:** Advanced drip sequences triggered by automations

5.4 Audiences

- Subscriber lists for targeting campaigns and drips
- **Sources:** Manual add, Subscriber Forms, Circle sync, API, Kickoff Forms
- **Circle Sync:** Marketing-checked Circles auto-sync members to Audience
- **Unsubscribe Management:** Automatic unsubscribe handling
- Audience segmentation

5.5 Subscriber Forms

- Customizable opt-in forms
- **Deployment:** Embed on website, standalone page, or within portal
- Captures email + optional additional fields
- Assigns to Audience on submission
- **Automations on submission**

5.6 Email Sending Settings

- From Name / From Email configuration
 - SMTP settings (custom email server)
 - Default sending domain
 - Email deliverability settings
 - Unsubscribe footer configuration
-

6. Automations Engine

6.1 Automation Architecture

SuiteDash's automations system consists of multiple interconnected components:

- **No-Code Automations** — Event-triggered chains of actions
- **Auto-Templates** — Reusable automation bundles with conditional logic
- **Scheduled Automations** — Time-based recurring triggers
- **FLOWs** — Multi-step onboarding/data collection sequences
- **Generators** — Pre-configured creation templates (Invoices, Projects, Folders, Deals, Documents, Follow-ups)

6.2 Automation Triggers (Where Automations Fire)

Automations can be attached to events across the platform:

Trigger Location	Trigger Events
CRM	Contact created, Contact role changed (Lead > Prospect > Client), Contact added to Circle
Deals	Deal created, Deal moves to new Stage, Deal won, Deal lost
Projects	Phase completed, Project completed
Invoices	Invoice paid, Invoice overdue
Estimates	Estimate approved, Estimate rejected, Estimate converted to invoice
Proposals	Proposal approved (signed), Proposal rejected
Documents	Document viewed, Document signed, Document completed (all signatures)
Forms	Kickoff Form submitted, Update Form submitted, Checkout Form completed, Booking Form submitted
Subscriptions	Subscription created, Subscription renewed, Subscription cancelled
Appointments	Appointment booked, Appointment completed, Appointment cancelled
FLOWs	FLOW step completed, FLOW fully completed
Support Tickets	Ticket created, Ticket status changed
LMS	Course completed, Lesson completed, Quiz passed/failed
Scheduled	Daily, Weekly, Monthly, Yearly, Custom interval
Manual	Admin-triggered on demand

6.3 Automation Actions (CRM Target — Contacts/Companies)

Action Category	Specific Actions
Email	Send email to Target, Email External(s) (contact or circle), Email Internal(s) (staff or team)
SMS	Send SMS to Target (requires Twilio)
Contact Management	Convert Prospect to Client, Set Coordinator, Set Salesperson, Send Portal Access Invitation Email
Audience Management	Add to Audience(s), Remove from Audience(s)
Circle Management	Add to Circle(s), Remove from Circle(s)
Community	Add to Community/Space, Remove from Community/Space
WORLDs	Add to WORLD(s), Remove from WORLD(s)
FLOWs	Manage On-Demand FLOW (assign one or more)
Follow-ups	Apply Follow-up Generator(s), Cancel Remaining Follow-ups
Auto-Templates	Trigger Auto-Template
Invoice	On-Demand Invoice Generator, Recurring Invoice Generator, Accumulating Invoice Generator
Subscriptions	Manage Subscriptions (cancel or replace plans)
Projects	Apply Project Generator
Tasks	Apply Task Template (with date basis and project matching)
Folders	Apply Folder Generator
Deals	Move Deal to Stage, Create a New Deal, Deal Generator
Documents	Generate Document (from Document Generator with dynamic placeholders)
Proposals	Dynamic Proposal Generator, Convert Proposal to Invoice
Tags	Add Tag(s), Remove Tag(s)

Action Category	Specific Actions
Custom Fields	Set Custom Field Value (including math operations: [[current_value]] + xx)
LMS	Grant LMS Product, Remove LMS Product
Checklists	Add to Checklist(s), Remove from Checklist(s)
Files	Send File Request
Notes	Create Note (on Target's Notes tab)
Webhooks	Fire Webhook Notification to custom endpoint

6.4 Automation Actions (Staff Target)

Action Category	Specific Actions
Email	Send email to Target (Staff), Email Internal(s)
SMS	Send SMS to Target
Forms	Fire Form Cannon(s) — send forms to staff
Teams	Add to Team(s), Remove from Team(s)
Schedules	Add to Schedule(s), Remove from Schedule(s)
Custom Fields	Set Custom Field Value (Staff-specific)
Documents	Generate Document (Staff document generator)
Community	Add to Community/Space, Remove from Community/Space

6.5 Auto-Templates

- Reusable automation bundles that combine multiple actions
- **Conditional Logic (IF/THEN):**
 - IF statements using Custom Field Values (Contact, Company Public, Company Private)
 - Select relevant field from dropdown, define condition value
 - EVERY logic: Day, Week, Month, Year with start date and optional expiration
- **Application:** Apply to Circles or individual Clients/Prospects
- **Multiple Selection:** Multiple Circles and/or Contacts/Companies can be selected

6.6 Scheduled Automations

- Time-based triggers: Daily, Weekly, Monthly, Yearly

- Custom interval scheduling
- Start date and optional expiration date
- Combine with Auto-Template conditions for complex scheduling

6.7 AI Logic Engine

- Evaluates data, documents, images, and uploads against custom criteria
- Triggers workflows based on AI assessment results
- Custom evaluation rules

7. Forms & Data Collection

7.1 Form Types

Form Type	Purpose	Access	Key Features
Kickoff Form	New contact registration / process initiation	Public (open internet, embed, or direct URL)	Defines role, coordinator, triggers automations, creates new CRM records
Update Form	Update existing contact/company/staff data	Authenticated only (portal)	Cannot be accessed unauthenticated, updates CRM data
Checkout Form	Purchase products/services	Public or Portal	Dynamic pricing, Items/Add-ons/Packages selection, payment processing
Booking Form	Schedule appointments	Public or Portal	Integrates with Appointment Generators, free or paid bookings
Subscriber Form	Email marketing opt-in	Public (embed or standalone)	Adds to Marketing Audience, no portal account required
Support Ticket Form	Submit support request	Portal or public	Creates new Support Ticket with inbox assignment

7.2 Form Builder Elements

7.2.1 Field Types

- **Default Fields:** First Name, Last Name, Email, Phone, Company, Address fields
- **Custom Fields:** All configured custom fields available
- **Advanced Blocks:**
 - HTML Block (custom HTML content)
 - Choice Block (multiple choice options)
 - Appointment Booking Block
 - File Upload Block
 - Signature Block
 - Consent/Agreement Checkbox
 - Dynamic Data Placeholders

7.2.2 Form Configuration

- Multi-step/multi-page forms
- Conditional field visibility
- Required vs. optional fields
- Custom submit button text
- Redirect after submission
- Success message customization
- Form styling and branding
- Embed code generation

7.3 Form Templates

- Pre-built form configurations
- Template Library with community templates
- Save custom forms as templates for reuse

7.4 Kickoff Form Special Settings

- **Role Assignment:** Define what role (Lead/Prospect/Client) the new contact receives
- **Coordinator Assignment:** Auto-assign a coordinator
- **Circle Assignment:** Auto-add to specified Circle(s)
- **Generator Triggers:** Apply Folder Generator, Project Generator, Invoice Generator, etc.

- **FLOW Assignment:** Assign On-Boarding FLOW
- **Automations:** Full automation chains on submission
- **Duplicate Handling:** Configure behavior for existing contacts

7.5 Form Cannons

- Send forms to specific users on demand or via automation
 - PLUS Bundle feature
 - Push forms to staff members' dashboards
-

8. Documents & eSigning

8.1 Documents Main Sub-Pages

- **Documents List** — All documents with filters
- **Document Generators** — Template library
- **Settings** — Document configuration

8.2 Document Properties

- Title
- Associated Contact/Company/Staff
- Content (rich text editor with dynamic placeholders)
- Signer(s) — who must sign
- Status: Draft, Sent, Viewed, Partially Signed, Completed
- Audit Trail (views, IP addresses, signature timestamps)

8.3 Document Generators

- Pre-created document templates with Dynamic Data Placeholders
- Signer placeholders auto-assigned based on target
- Single generator creates multiple personalized documents
- Triggered via automations or manually

8.4 eSigning Features

- **Signature Pad:** Interactive signature capture

- Handwritten signature (drawn)
 - Typed name auto-generated signature
- **Signing Options:**
 - Client-only signing
 - Client + Staff dual signing
 - Sign without login (external access)
- **Audit Trail:**
 - View tracking
 - IP address logging
 - Signature date/time stamps
 - Embedded in platform AND in downloaded PDF
- **Notifications:**
 - Email on document viewed
 - Email on document signed
 - Email on document completed
- **Automations:** Trigger chains on view, sign, complete events

8.5 PDF Signing (Power-Up)

- Upload existing PDF documents
- Add signature fields to PDF
- E-sign directly on PDF documents
- Part of Prime Bundle Power-Up

8.6 Dynamic Data Placeholders in Documents

- Contact fields (name, email, company, custom fields)
 - Company fields
 - Staff fields
 - Date fields
 - Custom field values
 - Inserted via {x} button in text editor
-

9. File Sharing & Exchange

9.1 Files Main Sub-Pages

- **Files Toolkit** — Main file management interface
- **Shared Folders** — Folders shared with clients/staff
- **File Requests** — Request files from contacts
- **File Transfers** — File transfer management
- **Folder Generators** — Pre-built folder structure templates

9.2 Shared Folders

- Created on admin side, shared with one or multiple Clients, Circles, or Staff
- **Permission Levels:**
 - **Edit:** Rename, Download, Add New Version, Delete files/folders
 - **View Only:** Download only
- **Notifications:** Email on first add to folder, email on each new upload
- **ZIP Download:** Entire folder downloadable as ZIP with structure preserved

9.3 File Types Supported

- All file types: PDFs, images (HEIC included), videos, documents, spreadsheets, etc.
- File preview capabilities
- Version control (add new versions to existing files)

9.4 File Requests

- Request specific files from contacts
- Customizable request messages
- Tracked status (pending, received)
- Triggered via automations

9.5 File Transfers

- Secure file transfer between admin and contacts
- Transfer tracking and status

9.6 Folder Generators

- Pre-defined folder structures with template files
- **Generator Types:** CRM Contact, Company, Staff, or Project
- Auto-generated inside Contact/Company's "Shared with me" folder
- Can include any number/level of nested folders and files
- Triggered automatically on new contact creation or applied to existing contacts
- Triggered via automations

9.7 Upcoming: Grid View

- Thumbnail previews for images and videos
 - Visual browsing without scrolling
 - Quick file location
-

10. Calendar & Scheduling

10.1 Calendar Main Sub-Pages

- **My Calendar** — Personal calendar view
- **Appointments** — Appointment management
- **Appointment Generators** — Booking configuration
- **Schedules** — Availability schedules
- **Settings** — Calendar configuration

10.2 My Calendar

- Personal calendar with all events, tasks, follow-ups, appointments
- Day/Week/Month views
- Color coding by event type
- Google Calendar sync

10.3 Appointment Generators / Booking Pages

- Each staff member can have a "Book Me" page
- **Configuration Options:**
 - Duration (appointment length)

- Padding (buffer time before/after)
- Time Slot Intervals (chunk size for available slots)
- Prep-time/Cut-off (minimum advance booking time)
- Available days/hours
- Maximum appointments per day

10.4 Booking Forms

- Embed inside portal or externally on website/landing pages
- Free or paid appointments
- **Paid Appointments:** Payment collected during booking, confirmed after successful payment
- Integrates with Kickoff Forms for new contact registration + appointment

10.5 Appointment Management

- **Rescheduling:** Contacts can reschedule; updates both calendars, sends email notifications
- **Cancellation:** Contacts can cancel with configurable policies
- **Calendar Add:** Email notifications include “Add to Calendar” links for Google Calendar, Yahoo, Outlook, iCal
- **Multi-staff:** Appointments show on both staff and client calendars

10.6 Appointment Calendar Settings

- Duration defaults
- Padding configuration
- Time slot intervals
- Prep-time settings
- Timezone handling (Target’s timezone or static)
- Working hours
- Holiday/blackout dates

10.7 Schedules

- Staff availability schedules
- Multiple schedules per staff member
- Schedule assignment via automations

11. Communication (Messaging, Chat, Talk)

11.1 Communication Channels

Channel	Type	Participants
Secure Messaging	Asynchronous (like email)	Staff <> Contacts, Staff <> Staff
Live Chat	Real-time messaging	Staff <> Contacts (1:1), Staff <> Staff (1:1 + Group Channels)
Team Talk	Project message board	Staff only (per project)
Client Talk	Project message board	Staff + Clients (per project)

11.2 Secure Messaging

- Message composition with rich text
- **Mass Messaging:** Send to multiple users simultaneously
- **Canned Responses:** Pre-saved quick replies
- **Folder Organization:** Organize messages into folders
- **File Attachments:** Attach files to messages
- **Read Receipts:** Notification when message is viewed
- **Permission-based visibility:** Recipients only see/respond to permitted users
- Available to Prospects, Clients, and all Staff Roles

11.3 Live Chat

- **Real-time one-on-one Direct Messages:** Staff <> Contacts, Staff <> Staff
- **Group Channels:** Multiple internal users in conversation
 - Public channels (visible to all)
 - Private channels (invite-only)
- **Typing Indicators:** Real-time “user is typing” display
- **Emoji Support**
- **Canned Responses** access
- **Embeddable Remote Chat (Power-Up):** Live chat widget for external websites

11.4 Privacy Mode (HIPAA Compliance)

- Default: Privacy Mode ON
 - Actual message content NOT included in email notifications
 - Protects privacy and supports HIPAA/privacy framework compliance
 - Configurable per-organization
-

12. Support Tickets

12.1 Support Tickets Main Sub-Pages

- **Ticket List** — All tickets with filters
- **Inboxes** — Organizational buckets
- **Settings** — Ticket configuration

12.2 Ticket Submission Methods

- Direct submission through SuiteDash portal
- Custom Support Ticket Form
- Via email (email-to-ticket)

12.3 Inboxes

- Customizable organizational buckets
- Examples: Billing, Development, General, Level 1-3
- Route tickets to appropriate teams
- Per-inbox assignment rules

12.4 Ticket Properties

- Subject/Title
- Description/Body
- Priority (customizable priority levels)
- Tags (organizational labels)
- Inbox assignment
- Assigned Staff
- Status (Open, In Progress, Resolved, Closed)

- Associated Contact/Company

12.5 Ticket Configuration

- **General Settings:**
 - Email-to-ticket configuration (receive new tickets via email)
 - Email replies to existing tickets
 - Default signature for staff replies
 - Auto-reply message on new ticket creation
 - **Staff Permissions:**
 - Viewing permissions (per staff)
 - Replying permissions (per staff)
 - Assigning permissions (per staff)
 - **Defaults:**
 - Default Priority for new tickets
 - Default Inbox for new tickets
 - Allow clients to set priority/inbox via Support Form
-

13. Learning Management System (LMS)

13.1 LMS Structure

Course

```
|– Module (like a "book")
    |– Lesson (like a "chapter")
        |– Quiz (optional)
```

13.2 Course Properties

- Course Title
- Description
- Thumbnail/Image
- Pricing: Free or included in Package/Subscription
- Enrollment: Open or restricted
- Completion Certificate
- Progress tracking

13.3 Modules

- Container for Lessons
- Sequential ordering
- Module-level progress tracking

13.4 Lessons

- Rich content editor (text, images, video, HTML)
- **Video Controls:** Require minimum percentage watched before proceeding
- **Content Locking:** Sequential learning enforcement
- Lesson completion tracking
- Drag-and-drop editor

13.5 Quizzes (In Development)

- Attached to Lessons or standalone
- **Question Types:** Multiple choice, True/False, Fill-in-the-blank, Matching
- Minimum score requirements to continue
- Reusable saved questions across multiple quizzes
- Auto-generate quizzes from categorized question pools

13.6 LMS Access Control

- Grant/Remove LMS Product via automations
- Include in Packages or Subscriptions for monetization
- Assign via FLOWS or Checkout Forms

13.7 Upcoming LMS Features

- Landing Pages (per course)
 - Self-Hosted Video
 - Templates
 - Certificates (automated generation)
 - Additional Pricing Options
 - No-Code Automations integration
-

14. Pages (Dashboards, Portal Pages, Landing Pages)

14.1 Page Types

Page Type	Visibility	Authentication	Dynamic Data
Dashboard	Internal (assigned users)	Required	Yes (personalized per user)
Portal Page	Internal (assigned users)	Required	Yes (same content, dynamic placeholders personalized)
Landing Page	Public (anyone with URL)	Not required	Limited

14.2 Dashboards

14.2.1 Dashboard Builder (Content Block Editor)

- **Pre-Built Blocks:** Tasks, Invoices, Files, Forms, Checklists, and more
- **Content Blocks:** Text, Photos, Videos, Charts, HTML
- **Dynamic Data:** Placeholders and Custom Field insertion
- **Layout:** Drag-and-drop complex layouts
- **Styling:** Color, background, Custom CSS, Google Fonts (size, color, weight, letter spacing)
- **Templates:** Built-in Template Library with pre-built layouts and blocks

14.2.2 Dashboard Assignment Priority System

Priority Level	Assignment Method	Display Rule
Highest	Direct user assignment	Always shown for that specific user
Medium	Circle or Team assignment	Shown if no Highest Priority dashboard
Lowest	Role-based assignment	Shown if no Medium or Highest Priority

- Unlimited dashboards can be created
- Each dashboard assignable for specific purposes

- Default dashboard for all users on creation

14.3 Portal Pages

- Multiple users see same content (except dynamic placeholders are personalized)
- Assignable to Circles, Roles, or individual users
- Created via Content Block Editor
- Accessible via “Content” top-level menu item

14.4 Landing Pages

- External-facing pages accessible via URL without login
- Public content: information, announcements, videos, charts, resources
- Used for lead generation, information sharing, marketing
- Embed Subscriber Forms for email capture
- Custom URL slug

14.5 Start Page Configuration

- Assign any Dashboard, Portal Page, or custom URL as the Start Page
 - Different Start Pages per role
 - Controls what users see immediately after login
-

15. White Label & Branding

15.1 Branding Main Sub-Pages

- **Platform Branding** — Overall visual identity
- **Login Page** — Custom login screen
- **Email Branding** — Email notification customization
- **Custom URL** — Domain mapping
- **Mobile App** — White-label mobile app

15.2 Platform Branding

- **Logo:** Upload company logo (sidebar, login, email)
- **Favicon:** Custom browser tab icon

- **Color Scheme:**
 - Pre-made color schemes
 - Custom color pickers for every element
 - Side navigation bar colors
 - Button colors
 - Accent colors
 - Background colors
- **Font Themes:**
 - Google Fonts integration
 - Font selection per element type: Headers, Paragraphs, Buttons, other elements
 - Font styles (weight, size, spacing)
- **Custom CSS:** Advanced styling override

15.3 Login Page Customization

- Custom background image
- Custom logo
- Custom welcome text
- Layout options
- Color scheme matching

15.4 Custom URL / Domain Mapping

- Automated domain mapping tool
- Replace SuiteDash URL with your own domain
- SSL certificate handling
- DNS configuration guidance

15.5 Email Branding

- **All email notifications editable:** 100% control over email content
- White-labeled sending (clients only see your branding)
- Custom From Name / From Email
- Email template editor
- Header/Footer customization

15.6 Mobile App Branding

- White-labeled mobile app for iOS and Android
 - Your logo and branding
 - Your app name
 - Consistent experience across devices
 - Free with all plans
-

16. Staff Management & Roles

16.1 Staff Roles Detailed

Role	CRM	Projects	Office	Marketing	Files	Admin Settings
Super Admin	Full	Full	Full	Full	Full	Full + License
Admin Man-ager	Full	Full	Full	Full	Full	Full (except Super Admin)
Admin	Full	Full	Full	Full	Full	Configurable per-admin
Project Man-ager	Full	Full	Limited	Limited	Limited	None
Office Man-ager	Full	Full	Full	Limited	Limited	None
Salesperson (CRM focus)	Full	Limited	Limited	Limited	Limited	None
Teammate	None	Assigned only	None	None	None	None
Freelance	None	Assigned (no Team Talk)	None	None	None	None

16.2 Staff Onboarding

- Add staff via invitation email
- Role assignment during creation
- Team assignment
- Schedule assignment
- Permission configuration

16.3 Admin Permissions (Individual)

- Granular per-admin permission control
- White Label settings access
- Template management access
- Specific feature area restrictions

16.4 Teams

- Group staff into Teams
- Team-based Dashboard assignments
- Team-based project assignments
- Add/Remove via automations

16.5 Permission Hierarchy

- Changes only permitted “up the ladder”
 - Teammate > Project Manager > Admin (allowed)
 - Admin > Teammate (NOT allowed)
-

17. Power-Ups (WORLDS, Community, Sales Funnels, PDF Signing)

17.1 Available Power-Ups

Power-Up	Price	Features
Prime Bundle	\$40/month	Sales Funnel Builder + PDF Document Signing + Embeddable Remote Chat
WORLDS	Included in Prime or separate	Platform segmentation by department/region/team
Community	Part of Prime Bundle	Discussion forums + live community chat
Sales Funnel Builder	Part of Prime Bundle	Landing pages, opt-ins, sales pages, funnels
PDF Signing	Part of Prime Bundle	Upload and e-sign existing PDF documents
Remote Chat	Part of Prime Bundle	Embeddable live chat widget for external sites

17.2 WORLDS

- Segment platform by department, region, or team
- Each WORLD is a secure, self-contained environment
- Silo resources, CRM data, and processes
- Maintain unified branding and control across WORLDS
- Up to 5 WORLDS included; additional at \$5/month each
- Add/Remove users to WORLDS via automations
- Freelancers can be limited to specific WORLDS

17.3 Community Forums

- Up to 5 fully independent Communities
- Feature-rich discussion forums
- **Spaces:** Organize discussions within communities
- No limit on Members per community
- **Live Community Chat** (optional)
- **Private Messaging** between Members (optional)
- Add/Remove from Community/Space via automations

17.4 Sales Funnel Builder

- **Funnel Types:** 2-Step or 3-Step funnels
 - **Pages:**
 - Landing Pages
 - Opt-in Pages (email capture)
 - Sales Pages
 - Thank You Pages
 - **Integration:** Offer LMS Products as funnel products
 - **Monetization:** Free or paid product offerings
 - **Automation:** Automate client journey through funnel stages
-

18. Settings & Configuration

18.1 Global Settings Areas

Settings Section	Key Configurations
Organization Profile	Company name, address, logo, timezone, business info
Platform Branding	Colors, fonts, CSS, logos (see Section 15)
Custom URL	Domain mapping
Login Page	Login screen customization
Custom Menus	Navigation menu per role
Email Notifications	All platform email templates
CRM Settings	Custom fields, roles, import/export
Office Settings	Invoice/Estimate/Document/Expense defaults
Marketing Settings	Email sending, SMTP, audience defaults
Project Settings	Task statuses, phase templates, defaults
Calendar Settings	Appointment defaults, timezone, working hours
Document Settings	Signing options, audit trail, defaults
Support Settings	Inboxes, priorities, tags, auto-reply, permissions
LMS Settings	Course defaults, enrollment options
File Settings	Storage, sharing defaults
Communication Settings	Privacy mode, chat settings
Security Settings	2FA, password policies, session management

Settings Section	Key Configurations
Manage Account	License, billing, plan management (Super Admin only)

18.2 Email Notification Templates

Every system email is customizable: - New Contact Welcome - Portal Access Invitation - Password Reset - Invoice Sent/Paid/Overdue - Estimate Sent/Approved - Proposal Sent/Approved/Rejected/Expiring - Document Sent/Viewed/Signed/Completed - Appointment Booked/Rescheduled/Cancelled - Support Ticket Created/Updated/Resolved - File Shared/Uploaded - Message Received - FLOW Assigned/Step Completed - Task Assigned/Due/Completed - Project Phase Complete - Marketing Campaign notifications - And many more...

19. Integrations & API

19.1 Native Integrations

Integration	Type	Features
Stripe	Payment Gateway	Accept payments, subscription billing, refunds
Braintree	Payment Gateway	Alternative payment processing
QuickBooks Online	Accounting	Sync invoices, payments, clients
Google Calendar	Calendar	Two-way calendar sync
Google Meet	Video Conferencing	Appointment video links
Zoom	Video Conferencing	Appointment video links
Twilio	SMS	SMS notifications and messaging
Zapier	Automation	Connect to 5000+ apps

Integration	Type	Features
Make (Integromat)	Automation	Advanced workflow automation
WordPress	CMS	Embed forms, portal integration
hCaptcha / reCAPTCHA	Security	Form spam protection

19.2 Secure API

- **Authentication:** API credentials from Integrations > Secure API
- **Rate Limits:**
 - Free Trial: 80 calls/month
 - Start Plan: 400 calls/month
 - Thrive Plan: 2,000 calls/month
 - Pinnacle Plan: 20,000 calls/month
- **API Capabilities:**
 - CRM Company and Contact management
 - Custom Fields schema
 - Project management
 - Subscribe Contacts to Marketing Audiences
 - Meta Attributes
 - Webhook endpoints

19.3 Webhooks

- Custom endpoint notifications
- Event signifiers for filtering
- Triggered via automations
- JSON payload delivery

19.4 Two-Factor Authentication

- Enable/Disable per-user
 - Authentication app support
-

20. FLOWS & Onboarding

20.1 FLOW Types

FLOW Type	Purpose	Trigger
On-Boarding FLOW	Required steps before full platform access	Auto-assigned on contact creation or Kickoff Form
On-Demand FLOW	Optional/triggered data collection	Manually or via automation

20.2 FLOW Steps

FLOWS consist of ordered steps, each requiring completion before the next:

Step Type	Description
Form	Fill out a form (Update Form, custom form)
File Upload	Upload required document(s)
File Download	Download and acknowledge document(s)
Appointment	Schedule an appointment
eSigning	Sign a document/contract
Checklist	Complete a checklist of items

20.3 FLOW Assignment

- Auto-assign via Kickoff Form submission
- Auto-assign via Circle membership
- Trigger via automations
- Manual assignment by admin
- Multiple FLOWS can be assigned simultaneously

20.4 FLOW Management

- Track completion status per user
- View submissions
- Resend/reassign incomplete FLOWS
- Automation triggers on step completion and full completion

20.5 Onboarding Automation Chain Example

- 1. Prospect fills out **Kickoff Form** on website
- 2. SuiteDash creates **Contact** with role “Prospect”
- 3. Assigns to **Circle** (e.g., “New Prospects”)
- 4. Applies **Folder Generator** (creates file structure)
- 5. Assigns **On-Boarding FLOW** (form > file upload > e-sign contract > schedule appointment)
- 6. Sends **Welcome Email** via automation
- 7. Adds to **Marketing Audience** (drip sequence starts)
- 8. Creates **Deal** in pipeline
- 9. Applies **Follow-up Generator** (follow-up reminders on calendar)
- 10. On FLOW completion: **Converts to Client**, generates **Invoice**, applies **Project Generator**

21. Generators (All Types)

21.1 Generator Overview

Generators are pre-configured templates that auto-create resources:

Generator Type	Creates	Target Types
Invoice Generator	Invoices with pre-set items/amounts	Contact, Company
Recurring Invoice Generator	Recurring billing cycles	Contact, Company
Accumulating Invoice Generator	Cumulative charge invoices	Contact, Company
Project Generator	Complete project with phases/tasks	Contact, Company
Task Template	Set of tasks within a project	Project
Folder Generator	Folder structure with files	Contact, Company, Staff, Project
Deal Generator	Deal cards in pipeline	Contact, Company

Generator Type	Creates	Target Types
Document Generator	Dynamic documents with placeholders	Contact, Company, Staff
Proposal Generator	Dynamic proposals	Contact, Company
Follow-up Generator	Series of follow-up reminders	Contact, Company

21.2 Common Generator Features

- Dynamic Data Placeholders in titles and content
- Triggered via automations or manually applied
- Multiple generators can chain together
- Date-based calculations (offsets from trigger date)

22. Custom Fields & Data Architecture

22.1 Custom Field Categories

Category	Visibility	Used For
Contact Custom Fields	Per-contact data	Individual person attributes
Company Public Custom Fields	Visible to company contacts	Company info shown to clients
Company Private Custom Fields	Admin-only	Internal company notes/data
Staff Custom Fields	Per-staff member	Employee/contractor attributes
Project Custom Fields	Per-project	Project-specific data

22.2 Field Types Available

- Text (single line)
- Text Area (multi-line)
- Number (supports math operations in automations)
- Date

- Dropdown (single select)
- Multi-select
- Checkbox
- File Upload
- URL
- Email
- Phone
- Currency
- Calculating Custom Fields (computed values)
- Custom QR Codes

22.3 Custom Field Usage

- Display on Contact/Company profiles
 - Insert into Forms as form fields
 - Use in Document/Proposal Dynamic Data Placeholders
 - Use in Automation conditions (IF/THEN logic)
 - Use in Auto-Template conditional triggers
 - Use in Follow-up Generator dynamic titles
 - Set values via automation actions
 - Math operations: `[[current_value]] + xx` format
 - API access for read/write
 - Display on Dashboards via Dynamic Data blocks
-

23. Gaps Requiring Backend Access

The following areas are documented less thoroughly in the official help center than the rest of the platform. This chapter notes where each gap lives so you know where to look first when you need granular detail.

23.1 Where official docs are thinnest

1. **Exact Admin Settings panel structure** — Every sub-tab, toggle, and dropdown within each settings area
2. **Complete email notification template list** — Every single system email that can be customized (estimated 50+)

3. **Content Block Editor** — Full inventory of all block types, their individual settings, and configuration options
4. **Custom CSS injection points** — All locations where custom CSS can be applied
5. **Permission matrix granularity** — Exact per-feature toggles available for each Admin permission
6. **Automation chaining UI** — How multiple automations chain together visually, sequencing rules
7. **Dynamic Data Placeholder complete list** — Every available placeholder by context (documents, emails, dashboards, forms)
8. **Calculating Custom Fields** — Formula builder interface, available functions and operators
9. **AI Logic Engine** — Detailed configuration interface, evaluation criteria options, supported data types

23.2 Documented partially

10. **Fly-out menu complete options** — Every option in the profile fly-out menu
11. **Quick Actions available per page** — Context-specific action buttons on each page
12. **Import/Export capabilities** — Exact CSV/data import mapping for each module
13. **Billing Dashboard client view** — Exact layout and options visible to clients
14. **Report/Analytics dashboards** — Any built-in reporting beyond widgets
15. **Webhook payload schemas** — Exact JSON structures per event type
16. **API endpoint complete list** — All available API endpoints and methods
17. **Mobile app feature parity** — Which features are available/limited in mobile vs. web
18. **Activity Log detail** — Exact events tracked in the activity log per contact
19. **Role-specific views** — Exact screen differences between each role when viewing same areas

23.3 Documented inconsistently

20. **Template Library contents** — Full inventory of pre-built templates available
21. **Keyboard shortcuts** — Complete list of keyboard shortcuts
22. **Notification preferences** — User-configurable notification settings
23. **Data export formats** — Available export formats per module
24. **Storage limits per plan** — File storage quotas
25. **Concurrent user limits** — Session management details

24. A 90-Minute Playbook: Configuring SuiteDash for a 5-Client Service Business

The previous twenty-three chapters describe what SuiteDash can do. This chapter describes what to actually do — in the order to do it — when you have a Pinnacle license, five clients, and ninety minutes before your next meeting.

The premise of the playbook is brutal: ignore every feature you don't need this week. The biggest mistake new operators make is trying to configure all of SuiteDash before onboarding the first client. The opposite approach gets you live faster, exposes the configuration choices that matter, and forces you to learn the platform on real work instead of in the abstract.

What you'll have when you finish

A working portal where five clients can each log in, see their files, submit support tickets, view their proposal or invoice, and message you. No marketing automation. No drip campaigns. No FLOWS. No custom dashboards beyond the defaults. Those come later.

Minute 0–10: White label, then stop

Open *Settings* → *White Label*. Set the platform name, upload your logo (square SVG or 512×512 PNG), and pick brand colors. Set the login URL to a subdomain you actually own — `portal.yourbrand.com`, not `yourbrand.suitedash.com`. The branded login URL alone is what makes the portal feel like yours rather than a SuiteDash deployment.

Do not configure the email white-labeling yet. SPF/DKIM/DMARC for the sending domain is a 30-minute rabbit hole and you don't need it for the first five clients. Default sender works.

Skip the custom domain for client-facing emails. Skip the favicon. Skip the legal pages. Come back to all of these after the first client is onboarded.

Minute 10–25: One client circle, one role customization

Create one Circle in CRM — call it `clients-active`. This is your one operational segment for now. Don't pre-create `prospects`, `churned`, `enterprise`, etc. The Circle exists so automations have something to filter on.

Then open *Custom Menus* → *Client role*. Hide every menu item that isn't `Files`, `Documents`, `Support`, `Messages`, and `Invoices`. The default client menu shows ten items

and most clients are confused by *Pages*, *Calendar*, and *LMS* on day one. Two minutes of hiding saves twenty minutes of “what is this?” emails per client.

Save. Move on. Resist the urge to add custom direct-link menu items.

Minute 25–40: A single dashboard widget set

Open *Pages* → *Dashboards* → *Client default dashboard*. Delete every widget except: (1) a welcome message Content Block addressing the client by their first-name dynamic placeholder, (2) the Recent Files widget, (3) the Open Tickets widget. That’s the dashboard.

If you want one more thing, add a Content Block with a static block of three links: “Submit a new request”, “Upload a file”, “View invoices”. Hard-link them to the respective pages. Five-client dashboards don’t need analytics widgets; the operator (you) is the one watching numbers from the admin side.

Minute 40–55: Three forms, no more

Create three Forms:

The first is a **new-client intake form** — name, email, phone, company name, project type (single-select), preferred contact method (single-select). Set its automation to: on submit, create a Contact in CRM, assign to the `clients-active` Circle, send a welcome email (template you’ll write in the next step), and create a Project from a template (template you’ll write after that).

The second is a **support request form** living on a dedicated portal page. Subject, description, attach files, urgency (low/medium/high). On submit, create a Support Ticket and assign to you.

The third is a **file-request form** — used when you need a document from a client. This one is internal-facing; you trigger it from the contact record. Optional for week one. If you skip it, manual uploads via the Files menu work fine.

Minute 55–70: Two automations only

The temptation here is to wire eight automations. Resist it.

The first automation: **on new contact assigned to clients-active Circle**, send the welcome email (one templated email with portal login instructions and an embedded link to set their password), wait three days, then send a follow-up email asking how onboarding is going. That’s it. Two-step sequence.

The second automation: **on Project status changed to Complete**, send the client a templated “Project wrapped” email with a link to leave a testimonial and another link to start the next engagement. This one captures the highest-leverage moment in your operational flow.

That’s two automations. You’ll add more after you see what your actual clients actually do.

Minute 70–80: One Project template

Open *Project Generators* → *New template*. Build the smallest version of your standard engagement: three phases, four tasks per phase, with the assignee set to you and the due-date offset set in days from project start. Don’t use dependencies yet. Don’t enable Kanban view in the template — let it default. Don’t add custom fields.

The point of the template is that the new-client form’s automation has something to generate from. The template will improve every month as you do real projects; v1 just needs to exist.

Minute 80–90: A single document template and a single invoice

Generate one Document Generator template for your most common deliverable (a kickoff doc, a recap, a status report — pick the one you most often send manually). Use three dynamic placeholders: client first name, project name, current date. Set the signer to the client if it needs a signature; leave it as a non-signed document if not.

Then go to *Office* → *Invoice Templates* and build the simplest version of your standard invoice. One line item, your standard rate or package price, your payment terms, your bank details or the Stripe-connect “pay invoice” button. That’s the invoice template.

Why this works

Nine of the twenty-three chapters in this guide describe features you don’t need on day one. Five clients don’t justify FLOWs, custom WORLDS, complex automation chains, marketing campaigns, the LMS, or detailed permission matrices. They justify three forms, two automations, one project template, one document template, one invoice template, one client circle, one customized menu, and one cleaned-up dashboard.

When you onboard the sixth client and notice the same email going out three times manually, that’s the signal to add the third automation. When you notice four clients asking the same question, that’s the signal to add a portal page or a knowledge base article. The platform’s capacity grows alongside your operational pressure, not ahead of it.

The configuration choices that matter become obvious through use. The ones that don't matter never come up. SuiteDash is large enough to absorb every operational pattern a small services firm will throw at it; the only mistake is trying to configure for patterns you don't have yet.

Three things to do at month two

Once you've run the playbook above and have five clients living in the portal, the next three highest-leverage additions in order are:

First, set up email white-labeling properly. SPF + DKIM + DMARC for the sending domain plus a custom MAIL FROM address. This is where the platform feels truly white-labeled. Allow yourself the 30–60 minutes here that you skipped on day one.

Second, build one drip campaign for prospects who haven't converted within 14 days. Three emails over two weeks, each addressing a different objection. Hook it to a separate Circle (prospects-stalled) and a manual tag from a CRM follow-up.

Third, set up one knowledge base portal page with the five questions every client has asked you in the first month. Link it from the support form. The volume of repeat support tickets drops sharply once the knowledge base exists.

After those three additions you're using maybe 25% of what SuiteDash can do. That's the correct level for the first 30–50 clients. Going beyond that is what the rest of this document is for.

About the author

Ikechukwu Ohu (“Ike”) is a Full Professor and Program Director of Industrial & Robotics Engineering at Gannon University in Erie, Pennsylvania. He has spent the past several years building a portfolio of digital operations companies in real estate services, compliance SaaS, and professional directories — each of them running on a SuiteDash backbone alongside a small collection of automation tools.

This guide is the documentation he wishes had existed when he configured the platform for the first time, and the playbook in Chapter 24 is the same playbook he uses every time a new operating company joins the portfolio.

More resources, including the rest of the seven-PDF *Operator’s Library* series, are available at his distribution page.
